FEATURES

The central supports for the standard rotary rings were made in nickel plated steel and were designed as a unified and compact component to support a fixed disc that is located above the rotating disc where the customer can mount his own equipment.

INSTALLATION

The supports are fixed on the central part of the cast iron using screws and pins for precision positioning and are designed to have a reduced dimension in height (distance between the fixed disc and the moving disc) and to preserve the large central hole for possible cable passage.

CARATTERISTICHE

I supporti centrali per gli anelli rotanti standard sono realizzati in acciaio nichelato e nascono come componente unificato e compatto per supportare un eventuale disco fisso che si trova sopra al disco rotante dove il cliente può montare le proprie attrezzature.

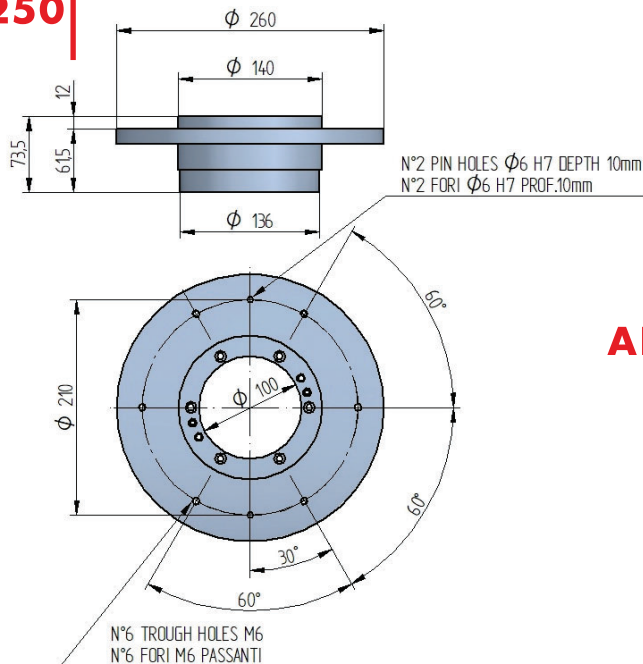

MONTAGGIO

I supporti si fissano sulla parte centrale della fusione in ghisa tramite viti e spine per un posizionamento di precisione e sono studiati per avere un ingombro ridotto in altezza (distanza tra disco fisso e disco mobile) e per preservare l'ampio foro centrale per un eventuale passaggio cavi.
