

New kit system for hydraulic filters

From October 1st, 2022 the new FGI kit system will start. From this date on, hydraulic filters of the series mentioned below will be shipped as kits for smaller order quantities. This new procedure ensures that FGI can always provide the correct version for your application - despite the immense variety of our products. You will find a list of the single components of your kit in your order confirmation, your invoice and your delivery bill.

Due to our extensive stock of finished goods, we will be able to deliver most kits in the shortest possible time.

Up to what order quantity are the hydraulic filters shipped as kits?

- Up to nine single filters of one version
- Up to four double switch filters of one version

For larger order batches, we will deliver the hydraulic filters assembled and ready for installation in the usual way. Customer-specific products (e.g. special painting, labeled type plate) are also excluded from this system as well.

When will which series be switched over to the FGI kit system?

- Medium pressure filters of the Pi 3xx / Pi 3xxx series starts October 1st, 2022
- Low pressure filters of the Pi 2xx / Pi 2xxx series starts November 1st, 2022
- High pressure and return line filters of the Pi 4xx / Pi 4xxx / Pi 5xxx series starts December 1st, 2022

What is included in a kit?

Depending on the order, a kit consists of up to three individually packaged components, including a filter housing, filter element and maintenance indicator.

If you have any questions about the new FGI kit system, please do not hesitate to contact us via the usual channels.
