

Transceiver with IO-Link Interface

SIGNAL 4.0 IO PRO[®]

IO-Link

OVERVIEW

Device description

The SIGNAL 4.0 IO PRO is a fully digital transceiver for industrial process measurement. The position of a magnetic float / piston is detected by means of a well-proven Hall sensor and transmitted via IO-Link Interface.

Additionally, it is possible to connect external sensors to monitor temperature and pressure. Those signals are then transmitted via the IO-Link Interface.

Application

- Use in combination with float-type sensors for various flow media (see table on page 2)
- Industry 4.0

Characteristics

- IO-Link Interface (IEC 61131-9)
- Internal recording of the flow rate
- Connection of external temperature and pressure sensors possible (Sensors not included)
- Conversion of the analog temperature and pressure signal to IO-Link
- Calculation of viscosity from measured temperature for ISO VG oils
- Same footprint as the proven SIGNAL 4.0
- Housing manufactured with additive manufacturing

Installation information

- Refer also to the applicable data sheets and operating instructions for the flowmeter!
- Additionally, refer to the operating instructions for the transceiver!
