## Gummi til industri og autobranchen

Hos A/S H. Sindby & Co. har vi beskæftiget os med gummiprofiler, kantlister, svampegummi og gummimåtter i knap 100 år. Vi har således en solid erfaring på området og besvarer gerne spørgsmål vedr. kemisk modstandsdygtighed, UV belastning, hårdhedsområde, trækstyrke, brudforlængelse, max. temperaturområde, slidstyrke, bestandighed o.s.v.

Alle profiler/gummiplader er lagervarer, hvis ikke andet er opgivet. Specialprofiler leveres efter ordre.

Vi løser alle opgaver - spørg os og få løsningen.

## Note

Tegningerne i dette katalog er ikke målfaste. Visse profiler i dette katalog lagerføres ikke men hjemtages kun på bestilling og ud fra mængde. Afklippede profiler tages ikke retur. Alle mål er i mm, hvis ikke andet er opgivet.

## Rubber for industry and automotive sector

At A/S H. Sindby & Co. we have been working with rubber profiles, edge profiles, sponge rubber and rubber plates for almost 100 years. We therefore have a thorough knowledge in this area and are always at your disposal if you have questions concerning chemical resistance, UV impact, hardness, tractive power, elongation at break, max. temperature range, resistance, constancy etc. All profiles / rubber plates in the catalogue are stock items unless otherwise stated. Special profiles can be supplied to order.

We can offer our assistance in all kinds of projects - ask us and we have the solution.

## Note

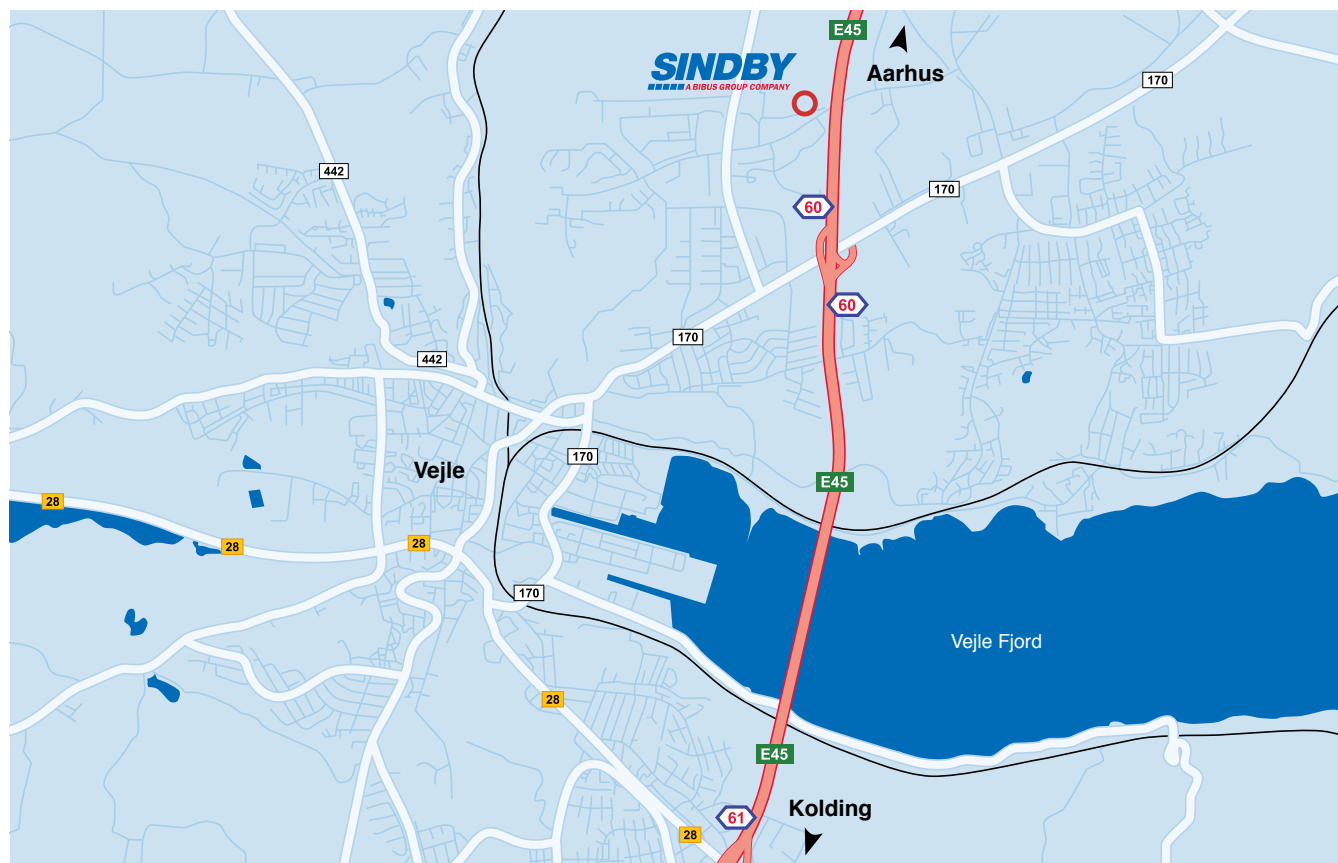

The drawings in this catalogue are not fixed. Certain profiles in this catalogue are not in stock and are only stocked on order. Profiles which are cut off cannot be returned. All measures are in mm unless otherwise stated.

## POM-profiler / POM edge trims

### POM-profiler

- En meget mere fleksibel opbygning med dets hukommelseffekt
- POM-profiler vejer meget mindre end profiler med metal indlæg
- POM-profiler kan ikke ruste eller oxidere
- Fremstillingen af POM-profiler er meget nemmere end profiler med metal indlæg
- Større sikkerhed ved montering. Man undgår rifter fra skarpe metalstykker
- POM-indlæg er ikke ledende som metal og kan derfor anvendes til beskyttelse eller overflade materiale

### POM-profiles

- A much more flexible structure with its memory effect
- POM-supported profiles is much lighter than metal-based profiles
- Over time, no metallic corrosion and oxidize
- Processing of manufacturing for POM-backed profiles is much easier than metal-backed profiles
- During installation does not damage human health such as sinking or cutting
- POM is not conductive support material, such as metal supports therefore wherever used in protection and coating material

## Lydabsorption / Sound absorption

### Selvklebende skum med Tedlarbelægning

Benyttes, alt afhængig af folieafdækning i førerkabiner, motorrum, kompressorer, generatorer, ventilatorer, turbiner, pumper og lignende.

### Self-adhesive foam with Tedlar coat

Depending on the foil covers this is used in cabs, engine compartment, compressors, generators, fans, turbines, pumps or the like.

## Lydisolering / Soundproofing

Lydisoleringsmaterialer er typisk lavet af åbencellede, fleksible skummaterialer i tungere densiteter. Den forøgede densitet er opnået ved at anvende regenereret skum.

Anvendelsesområdet kan typisk være lydisolering af motorrum i lystbåde, vindmøllehuse, kompressorer og andre støjende maskiner, hvor det er muligt at adskille støjkilden fra det omliggende område.

Da der ofte skal etableres et kølende luftskifte i disse situationer, laver man en lydsluse beklædt med lydabsorptionsmateriale.

Granulat koldskum med enestående lydæmpningsevne. Benyttes til beklædning af motorrum, maskinafskærmninger, ventilationskamre og støjkabiner. Grundet den lave densitet kan den også, med fordel, anvendes som absorbent.

Soundproofing materials are typically made of open-celled, flexible foam materials in heavier densities. The increased density is achieved by using regenerated foam.

The field of application can typically be soundproofing of the engine compartment in yachting, wind turbine housings, compressors and other noisy machines where it is possible to separate the noise source from the surrounding area.

Because it is often necessary to assure a cooling air circulation in these situations you make a sound lock covered with soundproofing material.

Granulate cold foam with unique soundproofing ability. This is used for coating of engine compartment, machine guards, ventilation chambers and noise cabins. Due to the low density it may also be used as absorbent with advantage.

## Lydisolering / Soundproofing

### Lydabsorption / Sound absorption

Lydabsorptionsmaterialer (PU) er typisk lavet af åbencellede, fleksible skummaterialer i lettere densiteter.

Anvendelsesområdet vil typisk være indvendig beklædning af førerkabiner, støjskærme, lydsluger, kanalvægge og lignende situationer, hvor det ikke er muligt at adskille støj-kilden fra det omkringliggende område.

Soundproofing materials (PU) are typically made of open-celled, flexible foam materials in lighter densities.

The field of application will typically be interior sheathing of cabs, noise barriers, sound locks, canal walls and similar situations where it is not possible to separate the noise source from the surrounding area.

#### Selvklæbende skum uden folie

Anvendes til indvendig beklædning af motorrum, maskin-fæstmønstre, støjkabiner, el-styretavler, paneler, indlæg i emballage m.m.

#### Self-adhesive foam without foil

This is used for interior sheathing of engine compartment, machine guards, noise cabins, electrical control panels, panels and inserts in packaging with more.

#### Selvklæbende skum med PVC-folie

Benyttes, alt afhængig af folieafdækning, til beklædning i førerkabiner, motorrum, kompressorer, generatorer, ventilatorer, turbiner, pumper og lignende.

Self-adhesive foam with PVC foil Depending on the foil covers this is used for sheathing in cabs, engine compartment, compressors, generators, fans, turbines, pumps or the like.

### KINA GUMMIPLADER - COMMERCIAL QUALITY

Varene er prisgunstige alternativer til Europa plader. Ikke en erstatning for europæiske kvaliteter.

Hele ruller leveres i plastfolie. Pladerne er et godt alternativ til hovedparten af de gængse opgaver. Anbefales ikke til højkvalitetspakninger med store krav til tolerancer og mekanisk styrke. Sammenlign evt. de tekniske beskrivelser. Pladerne har større tykkelsestolerancer end de europæiske. Mange andre kvaliteter kan skaffes i større mængder.

### CHINA RUBBER SHEETS - COMMERCIAL QUALITY

Excellent alternatives to European sheets at very favourable prices. SHOULD NOT be understood as a substitute for European qualities. The rubber sheets are delivered on rolls wrapped in plastic. The sheets are good alternatives for most common tasks. Cannot be recommended for high-quality seals with high demands on tolerances and mechanical strength. In case of doubt please compare the technical descriptions. The sheets have higher tolerances on thickness than the European ones. Many other qualities are available if large quantities are required.

### Gummimåtter / Rubber sheets

(1) = På grund af mange mulige kemikalier, opløsningsmidler, arbejdstemperaturer og arbejdstider kan de oplyste værdier, i enkelte tilfælde, udvise forandringer. Især kan en elastomeretype, som normalt udviser ringe bestandighed, udvise en meget god resistens overfor bestemte medier.

(2) = Ved relative lave h.h.v. høje temperaturer reduceres modstanden normalt.

(3) = God udvidelsesbestandighed overfor forskellige blødgørere.

(4) = Det drejer sig om grænseværdier, som kan svinge alt efter sammensætningen af blandingen. Vedvarende indsætning i grænseområderne ændrer de fysiske værdier. Til ekstreme påvirkninger kræves særlige elastomere-blandinger.

(1) = In view of the multitude of chemicals, solvents, application temperatures and times the value quoted may vary in some cases. For example one type of elastomer which normally has only low resistance properties could show very good resistance to certain media.

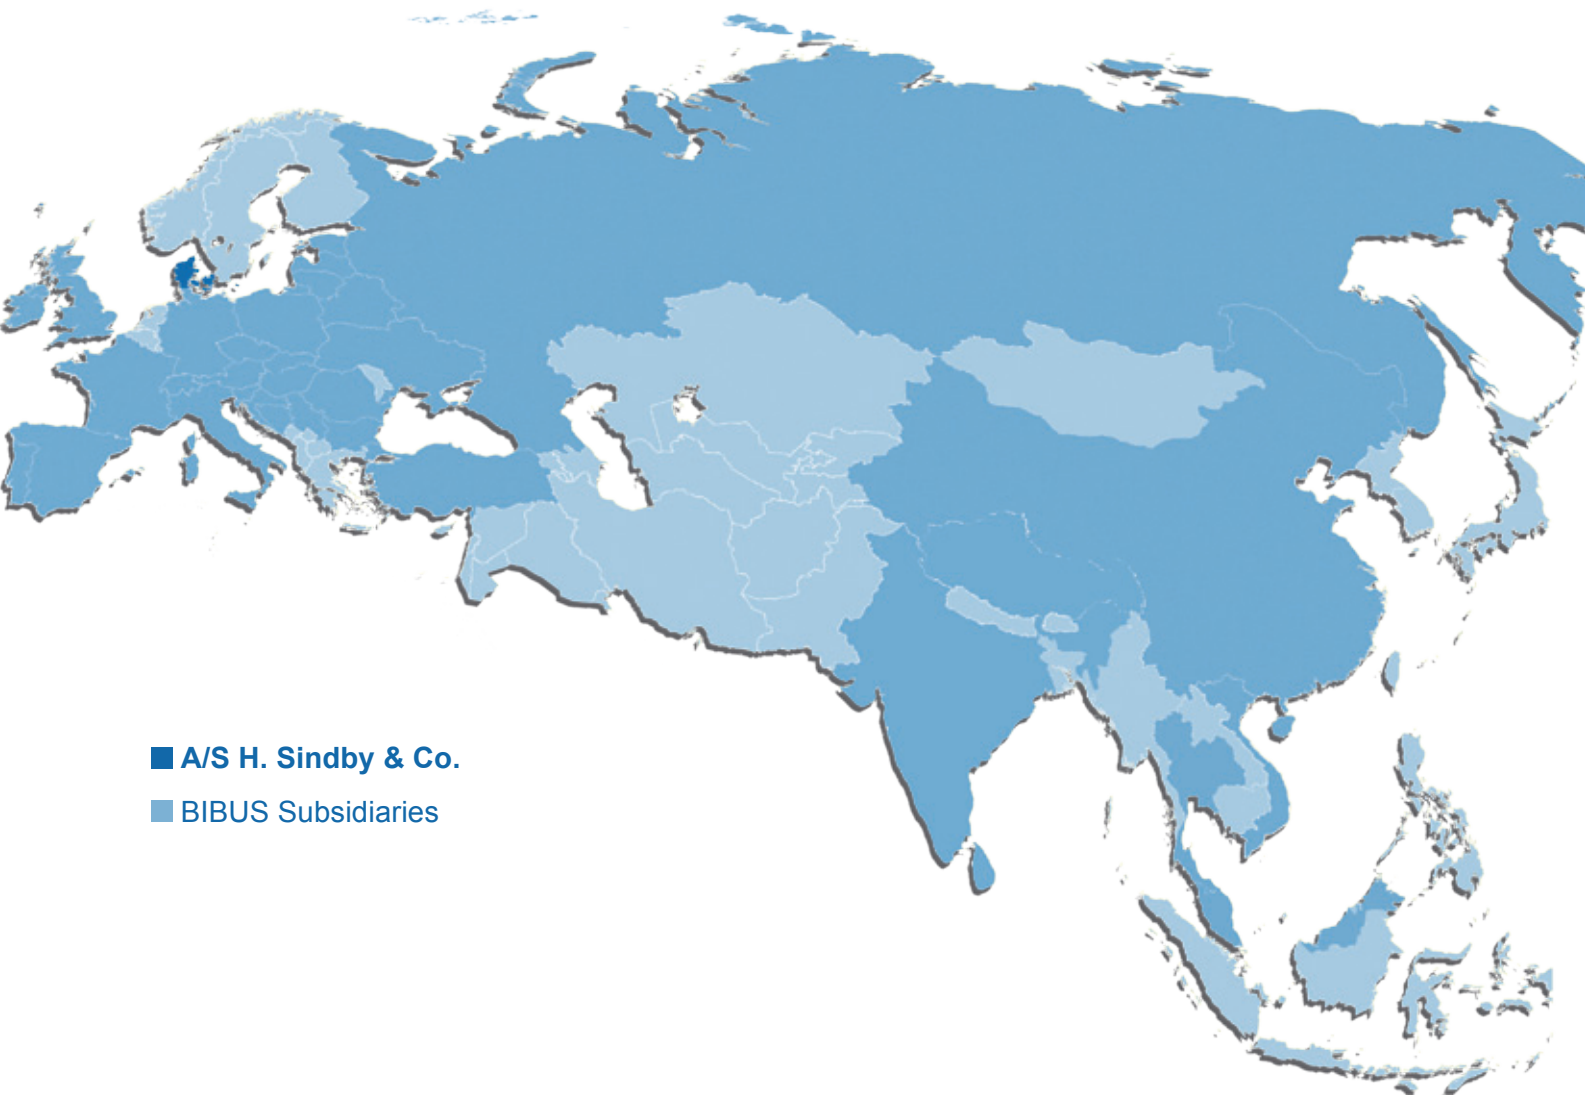

(2) = At relatively high or low temperatures, resistance generally drops.

(3) = Good expansion resistance to various ester based plasticizers.

(4) = These are borderline values which, depending on composition of the mixture, can vary. If used permanently in such borderline areas, this can lead to a change in the physical values. For such extreme applications it is advisable to use special elastomer mixtures.
